Software Produced and Contributed to Through Funded Research

Software is a regular part of the research that I do. I contribute to, fund, design and lead a wide range of software development throughout each year. In addition to projects I have led the development for, I have made contributions to a number of open source projects as well. An overview of my software contributions is available at my GitHub Repositories:

<https://github.com/orgs/The-Art-of-Big-Social-Data/>

<https://github.com/sgoggins>

The way GitHub works is that my repositories are located here. Each Repository represents a software product. Some of the repositories are forked from other authors, which is how one makes a contribution to a project one does not control.

Specific Software Developed includes:

1. (2015) Twitter Topic Miner
2. (2015) Open Online Community Data Manifest
